WHY WE ARE

SUDS COMPLIANT & GOVERNMENT BACKED

Our fully permeable resin bound system

SuDS (Sustainable urban Drainage Systems) is a series of methods for dealing with drainage in a sustainable manner, using technologies that minimise the environmental impact of our lifestyles, buildings, structures and surfaces.

In simpler terms; SuDS provide guidelines to follow in order to provide better drainage in built up areas to reduce the risk of flooding.

Our driveways are exactly what SuDS supports because the rain will pass through each layer of the driveway successfully. This means that water disperses rather than collecting underneath the resin surface. There is no need for added drains or grates as this water is passing through without the need for them.

This defies conventional thinking which for years has focussed on getting surface water off and away from the surface as best as possible. The surface water is actually directed into the ground and then released into the environment in a controlled manner.

Resin bound aggregates include small gaps between each aggregate where water is able to infiltrate the ground beneath. **A resin bound surface can handle 850 litres of water per square metre per minute.**

These guidelines have full government backing to the point where Government advice is that "If the surface to be covered is more than five square metres planning permission will be needed for laying traditional, impermeable driveways that do not provide for the water to run to a permeable area".

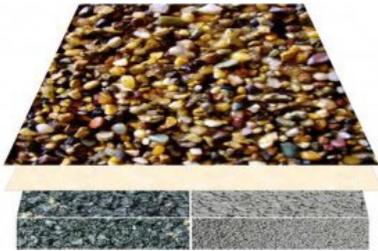

The result of having more resin bound driveways will mean that not only will there be less flooding but there will also be less strain on the existing draining systems that are already in place in the area. Less costs, less inconvenience and better safety.

RESIN VS BLOCK PAVING

Freshly laid block paving can look quite effective however the longevity of the installation is the main issue found with this system.

The bricks are made from pigmented cut blocks of stone or concrete. This means that it looks great when first laid, but it will fade within a relatively short space of time as the pigment loses its colour. Our resin driveways are built up of natural aggregates with no added pigmentation, meaning the colour you choose will withstand the test of time.

RESIN BOUND VS RESIN BONDED

The poorer of the two is the resin bonded system; involving applying a film of resin to the surface, on top of which aggregate is scattered; covering the resin. Once cured, any excess stone is swept up. The thin, impermeable, single stone layer tends to have a rough finish.

Because the stone only adheres to the resin on one side, there is potential for the stone to become loose and scattered.

Since the block paving isn't one smooth surface, it has gaps in where weeds can grow through. Overtime the sand between the blocks, which hold the bricks in place, will wear away. This can then result in the surface becoming subject to more weed growth or becoming uneven.

This is where the resin bound driveway is the much preferred option. There are no joints or gaps within resin-bound surfacing. This means weeds cannot grow through and jet washing the floor will not cause any damage.

Resin Bound driveways are 100% permeable, as are the base layers underneath- a full drain away system. It gives a non- fade, UV resistant finish. No more weeding! It is also frost resistant and coated with a non slip top layer for your safety.

	Bound	Bonded
Smooth surface	✓	×
Permeable	✓	×
No loose stone	✓	×
Long lasting	✓	×
Environmentally friendly	✓	×

100% OF THE WORK, 100% SATISFACTION

WE DO THE LOT, START TO FINISH

We dig out your driveway using our own machinery and then recycle the existing materials ourselves, using our own grab lorry

We are also able to supply all of our own Type 1 & Type 3

JMP
SURFACING

We don't rely on others, this keeps us on schedule and helps us to manage our company carbon footprint

100%

OF THE WORK CARRIED OUT BY US

90%

OF WHAT WE REMOVE WILL BE RECYCLED

WE NOW OFFER SECURITY BOLLARDS

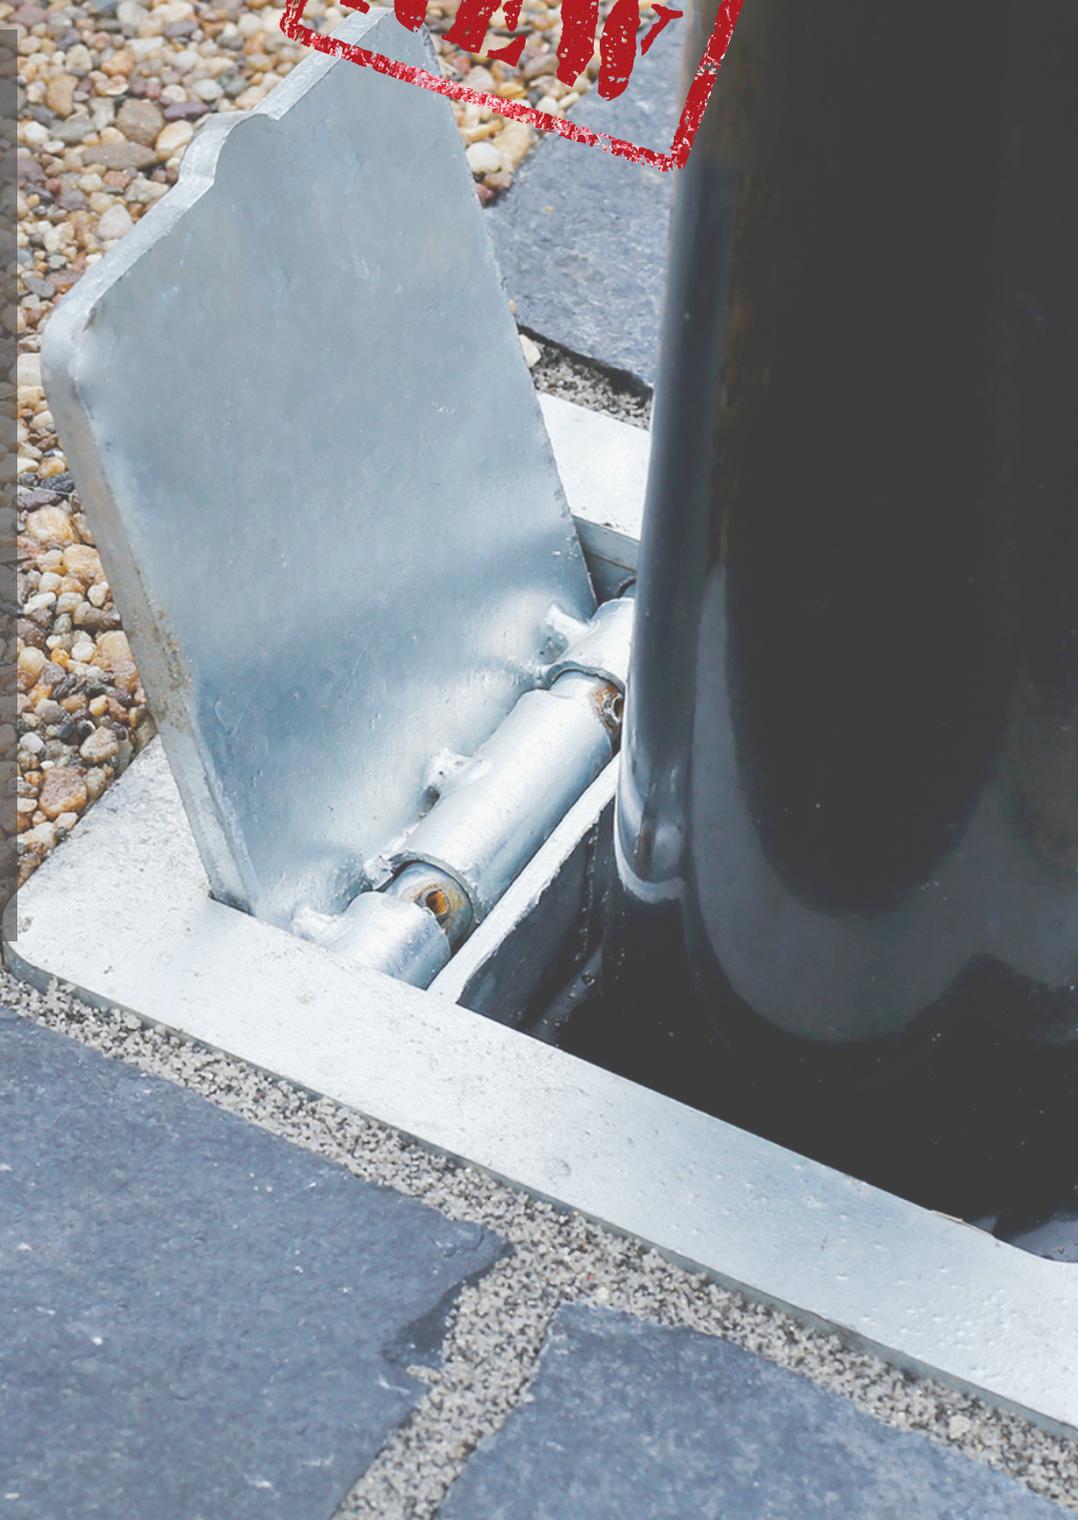

JMP
SURFACING

We know the importance of keeping your vehicles safe and are now sourcing the best quality bollards to install with your new drive.

Car theft is all too common and if it hasn't happened to yourself already you probably know someone who has been a victim.

Don't give thieves the opportunity to steal your vehicle and at the same time give yourself peace of mind with our security bollard installation .

WE SOURCE ONLY THE BEST MATERIALS

FOR OUR FULL RANGE OF RESIN COLOURS PLEASE

Don't just take our word for it...

TESTIMONIALS

CLAIRE KILLGALLON GARDEN PATIO & STEPS

"Professional, friendly and first class work carried out. The team were polite, punctual and I was very impressed with how hard they work. I was kept informed at every stage. I couldn't be happier. I would highly recommend JMP Surfacing."

BOBBIE SMITH DRIVEWAY

"Will definitely be using JMP for all surfacing work, really pleased with the work carried out on my drive by James and his team. Manhole cover adjusted, asphalt laid and resin to finish. Would highly recommend them!"

ASHLEY REEVES GARDEN PATIO

"Amazing job from James and his team on our patio . Recommend them to all, was best quote we got plus a trustworthy company to use."

NICOLE BASSETT DRIVEWAY

"Great job so pleased with the fantastic transformation would highly recommend"

ANDY ABERNETHY DRIVEWAY

"Had James and the guys come and do a resin drive for me, very happy with the work and the communication from start to finish."
